# FROM THE CEO'S DESK

## WELCOME BACK TO OUR NEW AND RETURNING STUDENTS

The Hatfield City Improvement District welcomes our new and returning students for the beginning of the 2020 academic year.

Student years are often considered the best periods of one's life. It is exciting and carefree for many. For others it can be stressful when resources are in short supply. Academic success, however, is of primary concern for everybody.

The role of the Hatfield CID is to create a conducive environment in which every young person can get his or her degree without getting hurt. In the times that we are living in, with high levels of unemployment, criminality, corruption and many other negative issues, we are, nevertheless, striving to create a world class suburb in Hatfield to make your experience a memorable one. A suburb where every person is safe, in a well-managed environment where everyone can enjoy life!

That Utopia is, however, a vision. We are a long way from actualizing it, but we will persevere. You can help us achieve it by paying attention to a few basic things:

**1.** The streets of Hatfield are not as safe as you think they are, especially at night. Students tend to own hi-tech items, some of which they need for their studies. These include valuable items such as mobile phones, laptops and tablets which are the very things criminals are looking for.

Last year we had no fewer than 115 street robberies in the area in close proximity of the University of Pretoria. We appeal to you not to display or use these items in public spaces in Hatfield or anywhere in Pretoria unless it is absolute essential to do so (e.g. when you have to call someone urgently). Our slogan is "stash it, don't flash it". Be "streetwise" and don't think that every person around you has your good intentions.

**2.** Parking your vehicle around the University is also not always a safe idea. In 2019, 65 vehicles were stolen, and 19 vehicles were broken into.

We strongly recommend you to invest in a student parking package in one of the three arcades in Hatfield. Your vehicle will be much safer there and it will not cost much more than the "fees" that informal car guards will be soliciting from you on a monthly basis.

Lucas Luckhoff

**3.** Students life is not only about studying. Breaks are essential during which you must also try to have fun! When you do, however, decide to visit a club or pub to have a drink with your friends, be very careful not to leave your drink unattended or accept a drink from someone you do not know or do not trust. Unfortunately, there are predators around who spike people's drinks, rendering them helpless to defend themselves against robbery or personal harm. Please be very careful.

**4.** Finally, be careful to experiment with any form of narcotics. Peer pressure will often lead to such experimentation and could become habit-forming. Drugs destroy people lives.

Over the years we have witnessed how bright potential is completely ruined by such activity. Also, be mindful that alcohol is the socially accepted drug which has caused considerable harm to individuals and families if not consumed responsibly.

It is your responsibility to be safe! Fortunately most students are. Join that cohort!

**The team at the Hatfield CID wishes every student the very best for 2020!**

HATFIELD CITY IMPROVEMENT DISTRICT IS IN PARTNERSHIP WITH THE CITY OF TSHWANE, SAPS BROOKLYN, METRO POLICE, UNIVERSITY OF PRETORIA, HATFIELD STAKEHOLDERS & BUSINESSES

"I'm grateful that there are still some good Samaritans out there, all thanks to the Peaceforce security officer, Lucia, for not letting me slide even though she only knew me for a few minutes. My story touched her and she was able to help."

This young lady arrived in Hatfield on 15 January 2020 from Ladysmith KZN, looking for student accommodation. She was directed to the Hatfield CID Security/Info Caravan (corners of Hilda and Burnett Streets).

As it was very late in the afternoon already, and after numerous attempts by our female security officer, Lucia, to find suitable accommodation for the anxious new student, nothing was available at such short notice. Our officer then offered to take the young lady to her own house for the night, as she could not leave her behind alone on the streets.

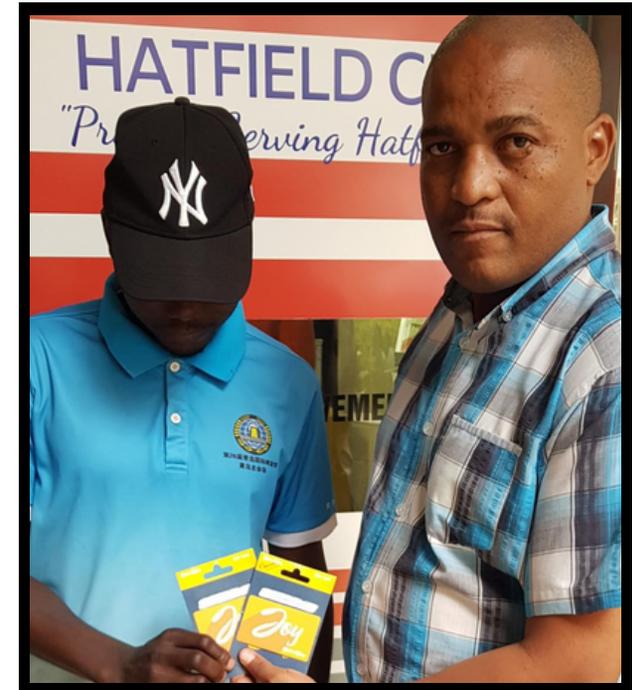

Lucia paid the student's taxi fare, gave her food and brought her back safely to Hatfield the following morning. They then managed to find suitable accommodation for the young lady.

Thank you Lucia for going beyond the call of duty to assist this new UP student.

## THE PUBLIC ASSISTING IN COMBATING CRIME IN HATFIELD

This gentleman received a R250 voucher from the Hatfield CID, for assisting our Peaceforce Security officers in arresting a cellphone thief in Arcadia Street, Hatfield.

**Another 2 vouchers to the value of R500, were handed over to this shy gentleman by our Peaceforce Contract manager, Mr. Patrick Marten.**

The man picked up a cell phone in Hatfield and instead of taking it home, he handed it in at the Hatfield CID offices. He also saw a man stealing a spare wheel in Hilda Street and immediately reported it to our security officers. An arrest was made and the wheel returned to its owner.

**Together we combat Crime in our area!**

# GOOD NEWS STORY

## SERVING THE PEOPLE OF HATFIELD - TSHWANE METRO POLICE DEPARTMENT

On 28 January 2020 Tshwane Metro Police Department officers arrested a **cellphone robber** shortly after he had committed a crime. What makes this arrest so significant, is that the suspect was carrying a firearm. The suspect was taken to the Brooklyn Police Station where a case of armed robbery was opened.

Our gratitude goes to all the Hatfield TMPD officers involved. The arrest of the suspect illustrates the critical role that the TMPD plays in the safety and security of the Hatfield community and the effective discharge of their duties, which makes them an asset for everybody who work, study, visitor live in Hatfield.

The Hatfield CID urges everyone to be **aware of their surroundings** and to take the necessary **precautions** to insure their safety. "We encourage you to **"stash it and not flash it"** e.g.: your cell phone, tablet, laptop, wallet and jewelry. There has been a spike in street robberies recently."

If you see  
SOMETHING  
Say SOMETHING.

Crime Prevention  
is EVERYBODY'S  
Business.

staying HEALTHY  
during the winter  
season

In South Africa, flu infections is highly seasonal and circulates during the winter. The average season starts the first week of June; however, it could start as early as April or as late as July. The season typically lasts about 12 weeks but can be as short as seven weeks or as long as 25 weeks.

There was a time when people got sick and no one knew why. They did not know that germs invisible to the naked eye were common. The first bacteria was discovered in 1676, and the first virus observed and noted by scientists in 1898. Scientists also learned that fungi and protozoa were spread using humans as hosts or carriers.

We have been learning about germs and fight them ever since. One thing we've learned is that each of us can help prevent the spread of potentially life-threatening infections and infectious diseases by taking a few simple precautions.

### How to Prevent Infections

The National Library of Medicine points out some steps we can all take to save ourselves and others from illnesses ranging from cold and flu to worse infections.

- Proper hand washing is the most effective way to prevent the spread of infections.
- Cover coughs and sneezes using a strong tissue or your mouth and nose in the fold of your elbow.
- Keep tissues and hand cleaners handy and use them regularly.
- Do not cough into your hands.
- Do not sneeze into your hands.
- Keep your fingers away from your eyes, nose and mouth.

# staying HEALTHY during the winter season continues

## To effectively wash your hands:

- Wet your hands and wrists, then apply soap.
- Rub your hands together for at least 20 seconds so the soap gets bubbly.
- Remove rings or scrub under them.
- If your fingernails are dirty, use a nail brush to clean them.
- Rinse your hands with running water.
- Dry your hands with a clean paper towel.
- Do NOT use the bathroom hand blower, as it just circulates airborne germs back onto your hands.
- Do not touch the sink and taps after you wash your hands. Use the paper towel to turn off the tap and open the door.

## Another option for cleaning your hands:

### Use an alcohol-based hand cleaner (sanitizer).

These products work if your hands are not visibly soiled. Use a coin size amount and rub your hands together, covering the back and front of your hands. Rub until dry.

## Another Way to Prevent the Spread of Germs and Sickness:

**Stay home if you feel sick or have a fever.**

**This helps protect everyone at work, school or the places you routinely go to.**

**If you are sick and have questions about the potential to infect others, check with your healthcare provider.**

## SNIFFLES, SNEEZES AND SORE THROATS

Colds, sinus infections and the flu all share these common symptoms, but understanding the differences can help you and your physician determine the course of care and get you back to feeling better as soon as possible.

### So, which is which?

The main difference between cold and flu symptoms is that **flu** more commonly includes fever, which can last for 3 to 5 days. The extreme fatigue associated with flu can persist for weeks.

Cold and flu are caused by different viruses, and, in general, the symptoms of **flu** are worse. Also, there are less likely to be serious complications from a **cold**, such as **pneumonia**.

Runny nose or nasal congestion is more common with **cold** than flu. Both viral and bacterial infections can cause common **sinus** symptoms, including: nasal obstruction, discoloured nasal discharge, facial pain and pressure, and a reduced sense of smell. Contrary to popular belief, the color of your nasal discharge does not differentiate a virus from a bacterial infection. Both of these infections can cause your nasal mucus to become more discoloured giving a greenish or yellow color to your nasal mucus. Within the first week of any of these symptoms, you should seek supportive care such as getting additional rest, drinking lots of fluids and using over-the-counter or home remedies for symptom management.

Antibiotics are not an effective treatment for the **cold** or **flu**. If, however, if your symptoms linger longer than seven days or if you have a high fever, your doctor may order an influenza test. Depending on the results the doctor may prescribe antibiotics if it is determined to be a **sinus** infection, or an antiviral medication in the case of **flu**.

**Given the number of infections that can travel through the air, it's unpleasant when someone coughs over us.**

According to research by scientists at the Massachusetts Institute of Technology, it's not just the person next to us we should worry about: **Coughing spreads droplets as far as six metres, and sneezing as much as eight metres.** These droplets stay suspended in the air for up to **10 minutes**.

# staying HEALTHY during the winter season continues

## PNEUMONIA

### What Are the Symptoms of Pneumonia?

Pneumonia symptoms can vary from being so mild that you barely notice them, to so severe that hospitalization is required.

How your body responds to pneumonia depends on the **type of germ** causing the infection, your **age** and your **overall health**.

### The signs and symptoms of pneumonia may include:

- Cough, which may produce greenish, yellow or even bloody mucus.
- Fever, sweating and shaking chills.
- Shortness of breath.
- Rapid, shallow breathing
- Sharp or stabbing chest pain that gets worse when you breathe deeply or cough
- Loss of appetite, low energy, and fatigue
- Nausea and vomiting, especially in small children
- Confusion, especially in older people

The symptoms of **bacterial pneumonia** can develop gradually or suddenly. Fever may rise dangerously high with profuse sweating and rapidly increased breathing and pulse rate. Lips and nailbeds may have a bluish colour due to lack of oxygen in the blood. A patient's mental state may be confused or delirious. The symptoms of **viral pneumonia** usually develop over a period of several days.

### Early symptoms are similar to influenza symptoms:

Fever, a dry cough, headache, muscle pain, and weakness: Within a day or two, the symptoms typically get worse, with increasing cough, shortness of breath and muscle pain. There may be a high fever and there may be blueness of the lips. Newborns and infants may not show any signs of the infection. Alternatively, they may vomit, have a fever and cough, or appear restless, sick, or tired and without energy.

Older adults and people who have serious illnesses or weak immune systems may have fewer and milder symptoms. They may even have a lower than normal temperature. See your doctor immediately if you have difficulty breathing, develop a bluish color in your lips and fingertips, have chest pain, a high fever, or a cough with mucus that is severe or is getting worse. It is especially important to seek medical attention for **pneumonia** if you are in a high-risk group, including adults older than age 65, children aged two or

younger and people with an underlying health condition or weakened immune system.

For some of these vulnerable individuals, **pneumonia** can quickly become a life-threatening condition.

## YOUR IMMUNE SYSTEM

### Our immune systems need energy - and the right nutrients - to work to their full potential.

Our immune systems need enough energy to make immune cells, which act as building blocks, and our enzymes, need vitamins and minerals to work effectively.

This means we need to make sure we're eating all of our body's requirements for macronutrients, vitamins and minerals, including **vitamins C and D**, as well as **B6, B12** and **folate, zinc, copper, iron** and **selenium**, as well as essential **amino-** and essential **fatty acids**.

**Avoid junk food — salty and sweet — and uncooked foods. That's because many of these foods are hard to digest, which is the opposite of what you want for your sore, achy body when you have a cold or flu.**

"The act of digestion taxes the body. If you are fighting the flu, your body is already taxed. "You do not want your body to spend its limited energy on digestion; you want it to be working on fighting the virus. So avoid fatty foods, especially if it's the unhealthy type of fat that is found in pizzas, burgers, fries, and other fast food.

Be wary of uncooked foods such as raw fish or certain dairy products like milk and cheese because they "have a higher potential of having a bacterial load or different types of organisms that your body has to break down. "Sweets should be avoided as well. Candy, chocolate and fizzy drinks, impose heavy loads on the body." Ingesting too much sugar can suppress the immune system.

Since hydration is key to healing, avoid drinking anything that will inhibit your body's ability to retain water. That includes caffeine and alcohol, which can make any pre-existing dehydration even worse and may delay recovery. For similar reasons, also avoid caffeinated drinks like coffee and caffeinated teas like black and green tea.

**Overall, water is the best fluid to drink when you are sick with the flu.**

**STAY INFORMED.  
STAY HEALTHY. STAY SAFE.**

## UP APPOINTS ITS FIRST EVER CHIEF OPERATING OFFICER

**Mr Sandile Frederick Mthiyane has been appointed as the Chief Operating Officer (COO) of the University of Pretoria (UP). This newly established position in the Executive reports to the Vice-Chancellor and Principal. The COO will be responsible for Facilities, Security and Information Technology Services at UP. Mr Mthiyane took up his new role on 6 January 2020.**

Mr Mthiyane has obtained the following qualifications: Master of Science in Property Studies from the University of Cape Town, Master's in Business Administration from the University of Stellenbosch Business School, Postgraduate Diploma in Business Management from the former University of Natal, Diploma in Project Management from Damelin and a BSc Electrical Engineering from the University of KwaZulu-Natal.

Mr Mthiyane is a Registered Professional Engineer with the Engineering Council of South Africa.

Prior to his appointment, Mr Mthiyane worked for different companies in various sectors of the economy. He is an accomplished Executive with significant achievements in different leadership roles. Prior to taking up his new position at UP, he worked at the South African Reserve Bank (SARB) as Head of the Corporate Services Department, a position that he held for the past six years. He was appointed as Executive Head of Engineering: Africa at ABSA/Barclays (Barclays Africa Group) for the period 2011 to 2013; Executive Head of Engineering and Head of Critical Engineering at ABSA for the period 2008 to 2011 and Head of Engineering Services at the SARB from 2005 to 2008. Mr Mthiyane's responsibilities in his past appointment included infrastructure, asset management and maintenance strategy, built environmental sustainability strategy, premises risk management strategy and engineering centre of excellence strategy and execution.

Mr Mthiyane and his team received the Governor's Award at the SARB, the most prestigious SARB award, for three years running during then Governor Tito Mboweni's tenure, and twice with different teams under his leadership during former Governor Gill Marcus's tenure. He also received an award for strategic initiatives and proactive approaches, which ensured stability in the bank's systems during the period of electricity supply instability in 2008.

The Hatfield CID wishes him well in his role as a new member of the University's senior management team, and looks forward to working closely with him.

## THE NEW UP COO

# Criminology Honours Students: Community Engagement Project 2019

**As part of their studies towards a Criminology Honours Degrees, a group of aspiring criminologists set out to explore Hatfield during September and October last year with the Hatfield City Improvement District. Their mission was to do a risk analysis on Hatfield and the Hatfield CID.**

Statistics, CCTV footage, stakeouts from building rooftops and other excursions as well as many interviews provided an exciting insight into what really happens in Hatfield when people think nobody is watching.

Crime statistics, including those cases not reported to the police, gave an interesting view on the reality, mainly experienced by students in Hatfield. Unfortunately, many students, they found, showed little interest in their own safety. Many did not care about crime and had no knowledge of the existence of Hatfield CID. This despite continued efforts to inform and educate students in this regard.

Comments such as - "I am here to have a good time, not stay a long time and crime is not my business", were some of the responses received.

Comprehensive reports from the four groups gave the Hatfield CID another point of view and some interesting recommendations, such as:

- UP should consider extending the free after-hour bus service during exam times
- Annual self-defense classes for students
- "SECUBER" free security services on-call for safe escort from campus to parking, residences or bus stops
- CID security officers should have a more intimidating appearance
- CID should have a more visible social media presence
- A Hatfield CID mobile office or security booth on campus
- Security and law enforcement related information signage
- Anonymous tip-off line
- Formalization/identification for informal parking attendants

# THE PERCEPTION SURVEY HATFIELD

**The Hatfield CID conducted the third successive, annual perception survey amongst residents, UP students and staff, and businesses in Hatfield. The outcomes of the survey allows the CID to better allocate its resources in response to shortcomings in its areas of responsibility in Hatfield identified by respondents to the survey. The survey also measures the levels of awareness of the community regarding the Hatfield CID and its activities, and assesses the degree of success that is being achieved in improving the living environment in Hatfield.**

As in the past, the data collected from UP staff and students has a high level of reliability. In order to supplement the limited number of individuals in the CID's database of Residents and employees, the survey was set up with an open link this year that enabled the CID to publish and distribute the electronic link on social media.

The open link brought in 53 responses from respondents other than from UP staff and students, with a very disappointing 16 responses to the email invitation. Overall results are, therefore, still skewed toward the University categories.

The results show an improvement in the levels of awareness of the CID and its activities, largely due to an increase in the level of awareness amongst the student population. Overall awareness has risen from 50% to 60% of the community with 80% of these respondents rating the importance of the CID at eight (8) or more on the ten-point scale.

There has been an improved awareness of all the lesser known initiatives of the HCID with a substantial improvement in the level of awareness of the website and electronic communication, Hatfield Events and the Recycling projects, and a slight improvement in the level of awareness of the monitoring and reporting of faulty street lights.

The levels of awareness of the top four (4) initiatives have dropped slightly, but still remains high. All projects except for the Metro Police Support and Cooperation initiative, which was unchanged, are reflecting higher success ratings in this survey.

Safety and Security is seen to be the most critical initiative undertaken by the Hatfield CID, followed by drug awareness and eradication, and Metro Police Support and Co-operation. The Recycling initiative has moved up in the rankings from eight to fifth place.

Taking both the quantitative and the qualitative feedback into account, public safety and security remains the number one priority for the community. The increasing levels of car theft were highlighted as well as the threat to personal safety after dark.

Traffic related problems are caused mostly by taxis. Disregard for rules and regulations of the road as well as disturbance caused by noise levels and hooting especially in the CBD, were the most frequently mentioned issues. Car guards remain a problem due to their high nuisance factor and concerns about substance abuse resulting in threatening and aggressive behaviour.

Vagrants are perceived to be less threatening but also provide a nuisance factor and fulfil no useful role. Despite the fact that the quantitative analysis ranked all the social and economic issues lower than safety and environmental issues, there were a significant number of comments calling for initiatives that engage community members directly to increase levels of awareness and the degree of outreach to those in need, and community building in general.

Notwithstanding the above concerns, overall sentiment in the community remains very positive.

Only 23.3% of the respondents are dissatisfied – a small proportion of these extremely so. 21.9% of the community perceive a deterioration in their quality of life; 37.2% perceive an improvement and 40.3% feel that their quality of life has not changed. This is a very positive outcome, but much improvement is possible. What is particularly satisfactory is that the shift in sentiment is positive when compared to the previous year.

In particular, there has been a 4% improvement in individuals that feel extremely satisfied and feel that their quality of life is much better or slightly better. There has been an additional 3% improvement in those that feel their quality of life has been maintained and who are satisfied with their experience as members of the Hatfield community.

There has been a slight reduction in the overall negative sentiment comprising 24.2% of the community. There has been an increase of 1.4% in positive sentiment rising to 56.7% of the community.

Availability of public parking and the sense of safety in public places remain the two aspects of life in Hatfield that are rated as inadequate. There has been no significant perceived improvement in either of these over the past year. The greatest improvement shown is in the adequacy of internet access where the rating has increased by 4.1% from a mean score of 3.26 to 3.39 on the five-point scale.

The CID will conduct the survey again in September 2020 and hopes for a much bigger response from groups in Hatfield other than just UP students and staff. The survey serves a useful purpose that can contribute to improving conditions for all in Hatfield.

Professor Denver Hendricks - UP

## PERCEPTION

**noun**

'The ability to see, hear, or become aware of something through the senses.'

The way in which something is regarded, understood, or interpreted.'

## REST IN PEACE JACQUES DE JAGER

**It was with great sadness that we received the news of the untimely passing of Jacques de Jager, a director on the Hatfield CID Board, following a tragic motor vehicle accident on 2 January 2020.**

Jacques, his girlfriend Angela and his sister's son Markus were traveling back from their family farm in Louis Trichardt, when the accident happened in the vicinity of Mokopane.

All efforts by people at the crash site including a medical doctor, were in vain. None of them survived.

Jacques was the Operations Manager for Respublica and a well know figure in the property industry. He was 40 years old. A memorial service, attended by hundreds of people; family, friends and work colleagues including the company's CEO and General Manager, was held in Polokwane on 10 January 2020. The Hatfield CID was represented by its CEO and COO.

Jacques will be sorely missed by the Hatfield CID.
